"Over the past several months, we've been listening intently to stakeholder feedback on the design of the Photoshop user experience. The suggestions and concerns were numerous, as expected, but more than anything we heard the desire for the platform to feel more like the desktop we all know and love. And so, with the upcoming beta release of Share for Review, we're delivering a gem of a feature that enables collaboration without leaving Photoshop. And this is only the beginning of our continued efforts to reinvent the platform and to empower users and their workflows in the most intuitive ways possible." "Photoshop is a great tool for many different kinds of users, but to reach our goal of making Photoshop a first-class creative tool across every device, we had to address the ways in which files are shared and use formats extended to the vast majority of users. We've looked at how people use Photoshop, and we've made some changes based on over 6,000 user experiences in Real-Time Prototyping, or as we call it, 'RTPP.'" "As we've made it easier to use, create, and manage projects in the Cloud, we've also made it specifically easier to share files with other people and organizations. And now, you can easily share files to the cloud from within Photoshop, directly from the file browser. In late 2018, we'll begin testing compatibility for more file types on the web, and we'll broaden the file types in early 2020 with support for all the most common file types, including structured content like text and tables."
